

# Unipi Axon M525

## PRODUCT DESCRIPTION

Unipi Axon M525 is a programmable logic controller (PLC) designed for automation, control, regulation, and monitoring. The M525 is an intermediate model of the Axon 500 line focused on a higher number of analog I/O, but also features all other types of inputs/outputs available on Unipi products (digital, relay). That makes it suitable for complex projects including measurements and control of analog components. The controller is also equipped with four serial interfaces (RS485 + RS232) for connection of extension modules or gateways, and a 1-Wire interface for connection of digital temperature or humidity sensors.
